

Synergetic eLearning Presents:

ABSENCES AND ATTENDANCES for SYSTEM ADMINISTRATORS

Simplify recording of daily absences and attendances within Synergetic.

Do your staff find marking the roll a tedious chore? Is it taking up too much of their valuable time? Are they finding it hard to keep track of which students are present or absent?

Synergetic provides the facility for recording many types of absences and possible absences. It provides an interface for teachers to mark class rolls and links the areas of attendances and absences to facilitate communication and minimise data entry. It allows the absence/truancy officer to easily view all the students who have not been marked present in classes and to resolve these through the absences system.

Course Outline:

- Configuring Absences and Attendances
 - Configuration File Maintenance Absences Settings
 - Configuration File Maintenance Attendances Settings
 - Group/User Security Permissions

Learning Outcomes:

- Setup and maintain the different absence events types (modes) to process different student absence scenarios.

Perfect For:

System Administrators and anyone who has permissions to configure file maintenance and group/user security permissions.
